

OWASP DEPENDENCY-TRACK

Community Meeting
May 2026

Organizational

- Community meetings are recorded and uploaded to [YouTube](#)
- Slides will be published in the [DependencyTrack/community](#) repository
- Please use the Zoom chat to ask questions during the presentation
- There will be an open Q&A section towards the end

Agenda

1. v5 Update
2. New documentation
3. v5 GA Plan
4. Q&A

5.0

[Open](#) ⚠ Overdue by 5 day(s) • Due by May 1, 2026 • Last updated 1 hour ago

v5 Update

v5 Update

- *Aggressively* cut down technical debt.
- Ported v4 changes up to 4.14.2.
- Implemented [vulnerability policy management](#) via UI.
- Implemented ability to [filter notifications](#) using CEL expressions.
- UX improvements for component search, global policy violation, and global vulnerability audit views.
- Switched from Liquibase to Flyway for database migrations ([ADR-020](#)).
- Reworked package metadata resolution to be more repository-friendly ([ADR-021](#)).
- Worked on v4 -> v5 migration tooling (not yet published).

New Documentation

New Documentation

New Documentation

- Targets v5. Not considering completeness a GA blocker.
- Maintained in separate [DependencyTrack/docs](#) repository.
- Currently deployed at [dependencytrack.github.io/docs/next/](#)
- Follows the [Diátaxis](#) framework to ensure structure.
- *Please* share feedback with us!

v5 GA Plan

v5 GA Plan – Constraints

- v5 was developed in separate repos, Git history has diverged.
- Hard cut-over would be breaking for many users.
- Want to support 4.14.x for up to 6 months as grace period.
- Upgrade to v5 must be a conscious decision.

v5 GA Plan – Repository Moves

Before	After
DependencyTrack/hyades-apiserver	DependencyTrack/dependency-track
DependencyTrack/hyades-frontend	DependencyTrack/frontend
DependencyTrack/hyades	

- Old repos will be archived with notices in README.
- Release assets and container images will remain available.

v5 GA Plan – Versioning

Before	After
hyades-apiserver 5.7.x	apiserver 5.0.0
hyades-frontend 5.7.x	frontend 5.0.0
hyades 0.7.x	

- Yes, incrementing 5.x versions in hyades-* repos was a mistake.
- Resetting versions OK b/c it coincides with repository moves.

v5 GA Plan – Container Image Renames

Before	After
dependencytrack/hyades-apiserver	dependencytrack/apiserver
ghcr.io/dependencytrack/hyades-apiserver	ghcr.io/dependencytrack/apiserver
dependencytrack/hyades-frontend	dependencytrack/frontend
ghcr.io/dependencytrack/hyades-frontend	ghcr.io/dependencytrack/frontend

v5 GA Plan – Container Image Tag Policy

Tag	Resolves to	Notes
:latest	v4 (until EOL)	<i>Flips to v5 when v4 EOL</i>
:snapshot	v4 snapshot (until EOL)	<i>Discontinued when v4 EOL</i>
:4.14.x	v4 releases	-
:5, :5.0, :5.0.0	v5 GA	-
:5-snapshot	v5 snapshot	-
:4-snapshot	v4 snapshot	-
:5.0.0-rc.X	v5 release candidates	-

v5 GA Plan - v4 master branch freeze

- Will stop accepting changes for v4 master branches.
- All contributions for v4 must target 4.14.x branch going forward.
- Will publish notices and instructions for contributors.
 - Banners in README.md.
 - MIGRATION.md file with details.
 - Pinned GitHub issue / discussion.
- v5 will be pushed to main branches, and become the default.

v5 GA Plan – Timeline

- 2+ weeks, depending on issues encountered

v5 GA Plan – Execution

v5.0.0 GA Cutover #6102
